DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 8-18, 22- 24, 26-31 and 33-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Hinrichsmeyer et al. (US 4,996,587).

Hinrichsmeyer (Fig 5, 6) discloses an integrated circuit package comprising, an interposer, substrate (10) comprising inherent a thin sheet ("carrier"; via multiple contiguous layers) having an opening (13, 15) first and second surfaces and an outline, a plurality of routing strips (24; an inherent bus line; Col. 2, Lines 44-55) integral with substrate, a plurality of bonding terminal, pads (not labeled; contact with item 27) disposed on said first surface, at least one pad being electrically connected with at least one of said routing strips, a chip (19) adhered to said second surface of said substrate, said chip having at least one contact, bond pad (21), wire bonding (22) electrically connecting said at least one bonding pad to at least one of said wire bonding pad to at least one of said routing strips(Col. 2, Lines 44-55), and potting (25) material filling said opening to cover said wire bonding and said at least one bonding pad; with at least one connection terminal, solder ball (Col. 3, Line 21) comprising a mass of solder disposed on said first surface of said substrate on at least one of said pads electrically connected to said contact; wherein said terminals are integral with said interposer and disposed

between two layers; wherein an electrically conductive layer is formed on said interposer.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7, 19, 25 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hinrichsmeyer et al. as applied to claim 1, 18 or 31.

Hinrichsmeyer does not appear to disclose wherein said substrate comprises one or more layers each less than 0.5 mm thick.

In any case, it would have been an obvious matter of design choice bounded by well known manufacturing constraints and ascertainable by routine experimentation and optimization to choose these particular dimensions because applicant has not disclosed that the dimensions are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical, and it appears prima facie that the process would possess utility using another dimension. Indeed, it has been held that mere dimensional limitations are prima facie obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical.
